Comfort Controls provides complete Turnkey BMS projects, incorporating building control, energy management / monitoring and access control systems, from system design and specification to installation and commissioning.

Whatever the size or complexity of your project, from a simple, stand alone, pre programmed BMS to large multi-building systems working across ethernet or fibre optic LANs with multiple control interfaces, Comfort Controls guarantees a professional, reliable, cost-effective service.

Unlike many other BMS companies that rely on sub contractors, Comfort Controls provides a complete in-house service from start to end; that’s from specification, through to the engineering / design of the system and onto the control panel manufacture, installation programming and commissioning. Retaining control over all aspects of our work ensures quality throughout and allows us to be flexible and meet deadlines - key considerations for our customers.

We are acknowledged partners for the best systems in the market, including Schneider Electric, Siemens and Trend and have been fully trained in all aspects, including application, engineering and commissioning, to ensure a quality installation. We provide extensive customer training to ensure our customers own staff are able to operate the installed systems to gain maximum benefits and efficiencies.

As an independent systems integrator with access to the very latest BMS energy saving technology from market leading manufacturers, we are able to select the best products for new builds, refurbishments and for integrating into existing systems. And, as you would expect from a forward looking company, we keep up to date with the latest innovative technology not just from
our existing partners but from manufacturers
around the world, enabling us to meet and
foresee changing customer requirements.

Energy Efficient Control Of

- Heating, including boilers and pumps
- Ventilation and air handling
- Chilled water and cooling systems
- Lighting
- Access Control

We can also integrate our BMS with third party
equipment and suppliers, such as fire alarm
 systems and all utilities metering, to present
usage and status information on one easy to view
platform. Metered information from the utilities
can also be fed to a monitoring and targeting
system where required or exported to a web
based energy bureau.

BMS Upgrades

Comfort Controls have completed numerous
upgrades in occupied buildings which means
we have a pool of experienced engineers who
are familiar with the challenges associated with
upgrading systems whilst minimising disruption
to services and occupants.

We can carry out works outside of working hours
(weekends / evenings) where necessary and using
our past experience we can develop a programme
of works to ensure that the work is carried out to
minimise downtime and costs.

Over the years we have successfully upgraded
systems in a wide range of challenging
environments including: hospital operating
theatres, data centres, laboratories etc. with
projects ranging from single controllers / control
panels to complete BMS systems with main plant
and hundreds of terminal box controllers.

Market Sectors

- Healthcare - Hospitals, Clinics & GP Surgeries
- Education - Universities & Schools
- Office Blocks
- Local Government
- MoD
- Retail
- Industrial
- Leisure
- IT & Data Warehousing
- Communications
- Transport
- Pharmaceuticals
  and many more
