Every customer is different and every BMS system is different, so Comfort Controls provides service and maintenance contracts tailored to your exact needs, rather than an off the shelf package.

Our competitively priced service and maintenance contracts cover all aspect of a BMS, from field devices to control panels. Following a pre arranged visit, we provide customers with a full report of all activities carried out, with recommendations and detailed costings for any work required.

We also make recommendations for system improvements, whether due to changes in a building layout or usage, new software or system upgrades, new energy monitoring and saving technology which enables your BMS to operate more efficiently.

Energy Audits
As part of the Comfort Controls service and maintenance package we are able to provide customers with a comprehensive Energy Audit.

Using an associate energy efficiency consultant, we examine all aspects of your building, from the materials used in its construction, plant equipment, lighting etc. as well as energy usage. We then provide a highly tailored detailed report with recommendations for improving energy efficiency. This could range from simple advice such as turning the heating down 2 degrees, through to replacing lighting with more energy efficient equipment.

We have a team of highly experienced engineers covering the South of England who are not only up to date with the latest BMS and energy saving technology, but also have hands-on experience of older technologies and legacy products.

Comfort Controls can provide:
- PPM Contracts
- Reactive fault finding and repair
- 24/7 bureau cover and call out facility
- Offsite secure software backups
- Remote Access Solutions to your BMS
